

API in Real life

API Application Programming Interface

lets say,
you went to a restaurant
**the waiter comes to you
and asks for your order**

The waiter acts as a connection between you and the Chef

You

User

Waiter

API

Chef

App

The waiter is API

after the food is prepared

The Chef gives the food to the waiter and it comes to you

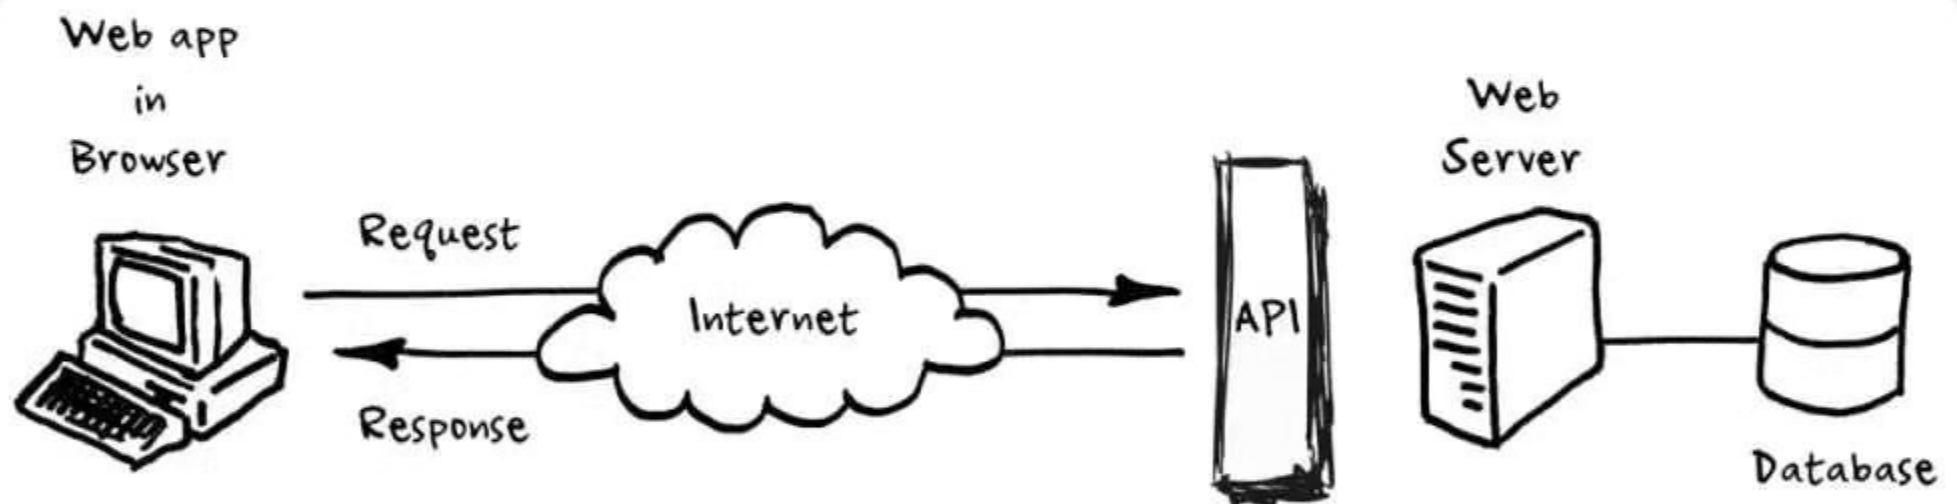

the waiter then sends
the order to the Chef

The Chef start preparing
the food

An API is a way for two or more computer programs to communicate with each other
